A

The L3Harris Technologies P25 in Lynchburg, Virginia, is among the Department of Homeland Security commercial vendor products with Compliance Assessment Program. The depth of L3Harris expertise and significant resources to develop critical-communications industry

P25 CAP, established under the U.S. DHS Science and Technology Directorate (S&T), provides a framework and process to prove, and then declare, P25 radios and base stations as compliant with national standards for performance and interoperability. The program requires each vendor's P25 equipment have demonstrable interoperability with key P25 features of another vendor's equipment.

COMPLIANCE ASSESSMENT LABORATORY RECOGNITION

The L3Harris P25 Compliance Assessment Lab is recognized for both performance and interoperability testing of subscriber and base station equipment under P25 CAP. A copy of our lab's Scope of Recognition can be found on the DHS Science and Technology website's P25 CAP Recognized Labs page at www.dhs.gov/science-and-technology/recognized-labs.

This recognition is only awarded to performance and/or interoperability testing labs that have been accredited to ISO/IEC 17025, General Requirements for the competence of testing and calibration laboratories. This international standard requires accredited labs to demonstrate technical competence and a robust quality management system. Performance labs must have equipment necessary to meet technical standards for measuring key P25 operational parameters, and interoperability labs must have P25 infrastructure equipment against which to test subscriber equipment.

L3HARRIS ADVANCES IN P25 TESTING

- > 2009: DHS launches P25 CAP
- > Jul 2009: L3Harris is first lab to be recognized under CAP program
- > December 2009: P5400 800MHz portable radio is the first declared CAP compliant
- > August 2016: DHS releases updated requirements, adding ISO 17025 accreditation and P25 conventional interoperability testing
- > April 2017: L3Harris lab is among the first receiving recognition for meeting the new DHS requirements
- > Jul 2017: L3Harris MASTR V Base station is the first product declared compliant to expanded CAP requirements
- > Jul 2017: DHS updates requirements adding P25 Phase 2 interoperability and performance testing
- > January 2018: L3Harris lab is the first to receive recognition for meeting the new Phase 2 requirements

PROOF OF COMPLIANCE AND WEB POSTING

Once all required testing is successfully completed by DHS recognized P25 CAP labs, an SDoC and supporting Summary Test Report (STR) is submitted to DHS for posting in the Approved (Grant-Eligible) Equipment repository on the DHS Science and Technology website's P25 CAP resource page (www.dhs.gov/science-and-technology/p25-cap). These documents are provided to each vendor for each model of P25 equ-13td(E)-(l)4 (og)-16 ()0.6 0 -1.333 Td(E)
